PROFESSIONAL SUMMARY

Full-stack software engineer with four production client platforms live today, plus a published native Android app. Owns the full release lifecycle remotely — serverless API design, third-party integrations, security hardening, and client deployments — with all client sites scoring 100 in Lighthouse Performance, Accessibility, and SEO.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Java, SQL, C#

Frontend: React, Astro, HTML/CSS, Accessibility (WCAG AA)

Backend: Node.js, REST APIs, Serverless APIs, Auth (signed sessions), Rate Limiting, CAPTCHA (Turnstile)

Platforms: Cloudflare Workers, D1/KV/R2, Android (Room, Jetpack), Resend

Tools: GitHub, CI/CD, AWS, MySQL

PROFESSIONAL EXPERIENCE

Full Stack Developer (Contract) Remote | 2026

Arkham Enterprises (Apex Solar & Construction) | arkhamsolar.com

- Built and deployed a marketing/lead-gen platform in React (React Router, Framer Motion) with a Cloudflare Workers backend delivering spam-protected contact and multi-step quote forms via the Resend API.
- Implemented deep-linked quote flows (?type= URL params) so service pages, ads, and AI agents drop prospects into a pre-filled quote form; shipped LocalBusiness JSON-LD, llms.txt agent discoverability, and WCAG AA accessibility.

Full Stack Developer (Contract) Remote | 2025–2026

Blair Sportsmen's Club | blairsportsmensclub.com

- Built an event and reservation platform on Astro + Cloudflare Workers: a live availability calendar (reserved/booked/event states) drives barn reservation requests through calendar-to-form prefill and a Turnstile-protected email pipeline.
- Shipped trap-league score leaderboards with per-event round breakdowns in a deep-linkable modal, plus Google Maps integration and CLS-safe rendering for all JavaScript-driven content.

Full Stack Software Engineer (Contract / Production Delivery) Remote | 2025

KIL Construction & Friends of Lake Henry | kilcon.work, friendsoflakehenry.com

- Built and deployed two serverless production platforms using Astro, TypeScript, Cloudflare Workers, and D1/KV/R2 — signed cookie sessions, Turnstile CAPTCHA, and edge rate limiting, serving real clients with zero downtime incidents.
- KIL Construction: designed a client review system (public submission, admin moderation with replies, aggregate ratings) and an R2-backed media pipeline with secure admin tooling for gallery assets.
- Friends of Lake Henry: built a custom admin CMS — events, moderated community photo submissions, donor recognition, and raffle management — operable by non-technical board members, with API routes and auth middleware in a single integrated codebase.

Android Engineer — Best By Manager (Production App) Google Play | 2025

Independent | play.google.com — com.bestbymanager.app

- Shipped a kiosk-style Android inventory app to Google Play — closed beta through v2.0.0 — with an offline-first Room database, ZXing barcode scanning, and Open Food Facts API integration.
- Built a three-tier permission model (Owner, Admin, Employee) with PIN-based sessions, bcrypt credential storage, and biometric-gated owner controls.

EDUCATION & CERTIFICATIONS

B.S. in Software Engineering — Western Governors University, 2025

A.A.S. in IT Software Developer — Chippewa Valley Technical College, 2024

AWS Certified Cloud Practitioner (2025) • CompTIA Project+ (2024)
